

DMart Sales Analysis Dashboard

Basic Understanding :

Sales Analysis : Sales analysis is the process of examining sales data to understand trends, performance, and opportunities for improving revenue and business strategies.

Dashboard: A dashboard is a visual representation of data that provides a quick overview of key metrics and insights. In this project, we use a dashboard to display Sales analysis data.

Data Visualization: Data visualization is the graphical representation of data to help users understand trends, patterns, and insights more easily.

OBJECTIVE:

To develop a Sales dashboard to track DMart's sales, profits, and customer trends across regions, customer segments, and product categories. The dashboard helps identify key patterns, such as top-performing products and areas needing improvement, making it easier for the business to make informed decisions.
